PROFESSIONAL SUMMARY

Full-Stack Developer who ships complete products and contributes upstream. Built an unofficial Vercel Android Companion when no official mobile client existed. Active contributor to Google Gemini CLI (PR #29718 — rootless Podman sandbox fix) and Supabase. Ships multi-tenant SaaS with auth, PostgreSQL RLS, realtime streams, and server-side AI. Seeking remote junior / internship roles on product teams.

KEY PROJECTS

Vercel Android Companion ★ Flagship | Kotlin · Jetpack Compose · Room · Vercel API
github.com/AbbasFullstack/vercel-android-companion
- Unofficial native Android client for monitoring Vercel deployments — Geist-style UI, live build logs, 1-tap redeploy.
- Room DB offline cache + OAuth2; public APK release v1.0.0.

DevDesk AI | Next.js · Supabase · Server-side AI · MCP
github.com/AbbasFullstack/DevDesk-AI- · live demo
- AI workspace for source-backed code questions with cited file paths; GitHub import + RLS multi-tenant isolation.

PulseBoard AI / CryptoWatch / VaultX | Next.js · Supabase RLS · WebSockets · ethers.js
- Workspace CRM with caller-bound onboarding; realtime crypto watchlist; testnet wallet with server-side RPC proxies.

OPEN SOURCE

Google Gemini CLI — PR #29718
- Fixed rootless Podman EACCES: detect rootless mode, append --userns=keep-id, 5s probe timeout. Unit tests included.

Supabase — PR #51226
- Docs fix: Firebase Auth example .id → .uid verified against UserRecord types.
