

Abbas Hussain

Full-Stack Developer

Islamabad, Pakistan • Remote-friendly • Portfolio • GitHub • LinkedIn

Professional Summary

Full-stack developer specializing in React, Next.js, TypeScript, Node.js/Express, APIs, PostgreSQL, and Supabase. Builds complete web products across developer tooling, authenticated SaaS workflows, real-time data interfaces, AI integrations, and testnet Web3 applications. Strong focus on secure server-side boundaries, typed API contracts, responsive UX, and evidence-based delivery through live demos and public repositories.

Technical Skills

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS, responsive UI

Backend & APIs: Next.js API Routes, Express, REST APIs, OpenAPI, tRPC, server-side validation

Data, Auth & Security: PostgreSQL, SQL, Supabase Auth/RLS, MySQL/TiDB, OAuth

Tools & Delivery: Git, GitHub, Vercel, API documentation, TypeScript SDK workflows

Applied Engineering: Server-side AI routing, source-aware code workflows, WebSockets, ethers.js

Experience

Independent Full-Stack Developer

May 2023 – Present

Self-Directed Project Work • Self-employed

- Design and ship full-stack web applications from product requirements through responsive UI, authentication, backend routes, database workflows, API contracts, and deployment.
- Build account-scoped workspaces, GitHub and ZIP source ingestion, OpenAPI validation and mock generation, real-time WebSocket interfaces, and testnet Web3 flows.
- Apply security-aware engineering practices by keeping credentials server-side, using row-level access controls where applicable, and documenting integration boundaries.
- Maintain verifiable delivery evidence through live deployments, public GitHub repositories, project documentation, and a curated portfolio.

Selected Projects

DevDesk AI | [Live](#) • [Source](#)

Built an authenticated developer workspace that turns GitHub repositories or ZIP projects into safe source manifests and cited code Q&A. Implemented account-scoped workspaces, protected ingestion, server-side AI routing, and review-gated GitHub writes.

OpenAPI Forge | [Live](#) • [Source](#)

Built a contract-first API workspace that validates OpenAPI specifications, turns them into documentation previews and schema-derived mocks, preserves specification versions, and generates TypeScript clients.

VaultX | [Live](#) • [Source](#)

Implemented a multi-chain testnet wallet experience with encrypted-keystore flows, account import, balances, activity history, provider proxy routes, and OpenAPI documentation.

CryptoWatch | [Live](#) • [Source](#)

Delivered an authenticated real-time crypto watchlist using Supabase, PostgreSQL row-level security, Binance WebSocket prices, and interactive market charts.

Education & Professional Development

Self-Directed Study in Full-Stack Web Development

May 2023 – Present

Independent Study

Ongoing project-based study focused on React, Next.js, APIs, databases, authentication, developer tooling, realtime systems, and technical documentation.
